NEBRASKA WEEKLY WEATHER AND CROP REPORT

Release 11/29/71

Week Ending 11/29/71

**WEATHER** Cloudy, mild weather with frequent light precipitation prevailed in Nebraska the past week. Light snow, ranging from one to two inches fell in both the far east and far west early in the week and a general snow of two to seven inches fell southeast of the Grand Island-Norfolk line over the week end. Temperatures averaged near normal in the east and from four to six degrees above normal in the west.

**CROPS** Harvesting was slowed during the past week by muddy conditions, rain, and snow. Corn harvest advanced 1 percentage point to 95 percent completed compared with 90 percent normally harvested to date. Sorghum harvest is about 99 percent completed with only small acreages yet to be harvested. The soybean harvest is virtually completed.

Major farm activities were completing harvest, plowing, stalk shredding, and livestock feeding.

Winter wheat condition has improved slightly. Plant growth should generally be sufficient to prevent blowing during the winter. The greenbug infestation in southeast counties is being controlled by cold weather.

**LIVESTOCK** Livestock remained in good condition and were gleaning harvested fields. Field stubble has been adequate in most areas to maintain cattle. Snow received in the southeast over the week end will limit forage availability and increase supplemental feeding. Mud problems exist in feedlots with poor drainage.
